## Fall Natural Gas Safety: Have Your Appliances Checked Regularly

For your safety it is important to have major electric, natural gas, or other fuel-burning appliances and equipment – such as furnaces, boilers, ranges, water heaters, and clothes dryers – periodically inspected. Failure to have this equipment properly maintained could lead to property damage, personal injury, or even death.

Have a trained professional heating contractor perform a safety inspection on all fuel-burning appliances each year. The contractor should check to make certain:

- All appliances are installed and operating properly.
- All burners receive enough outside/fresh air for complete combustion.
- All vents, chimneys, and flues are clear and well connected.

### Other Safety Tips:

- Never use an oven or range as a space heater.
- Never let the car run in an attached garage.
- Never sleep in a room with an unvented gas or kerosene space heater.
- Never operate gasoline-powered engines (generators, chain saws, etc.) in enclosed spaces.
- Never use a barbecue or charcoal grill indoors.

## CHEMISTRY

Natural gas has no odor, so we add the foul-smelling compound, Mercaptan, to alert you to its presence.
